(54) Title: CONTAINER FOR FOOD

(57) Abstract: It comprises two pieces comprising a base (1) and a lid (2). It is characterized in that the coupling means between the lid (2) and the base (1) are formed by a rim (3), provided on the edge of one of the pieces of the container, which defines a C-shape cavity (4), into which a complementary flange (5), provided on the edge of the other piece of the container, is fitted. It is obtained a container for pizzas and the like which occupies a reduced space when it is opened compared with the well-known container for pizzas, because the lid is not joined to the base.
